Team Leader for Hackathon on AI and Machine Learning

SUMMARY

I am a full-stack developer with a background in both engineering as well as the arts which allows me to bring a unique perspective to a team. I am driven to create a product that positively affects those around me on a personal level while also showing my true potential as a developer. Although I am young, I have built myself a path to break into the software engineering world through hard work and dedication to my craft outside of the normal path most students take.
